

jQuery Tasks

Task 1: Basic jQuery Selectors

Create an HTML file with different elements like `<p>`, `<div>`, `<ul>`, `<li>`, `<a>`, and `<button>`.

Use jQuery selectors to apply different styles or changes to these elements.

- Change the background color of all `<p>` elements.
- Hide all elements with the class 'test'.
- Select and highlight all `<li>` elements inside `<ul>`.

Task 2: Manipulating Attributes

Create a webpage with multiple `<a>` tags with different href attributes.

Use jQuery to:

- Change all links containing 'example.com' to 'google.com'.
- Add `target='_blank'` to all `<a>` elements without a target attribute.
- Modify the title attribute of all images to 'Updated Image'.

Task 3: Using jQuery Effects (Hide, Show, Fade)

Create a section with a paragraph and buttons labeled 'Hide', 'Show', and 'Toggle'.

Implement:

- `hide()`, `show()`, and `toggle()` on the paragraph when respective buttons are clicked.
- `fadeIn()`, `fadeOut()`, and `fadeToggle()` for a `<div>` when another button is clicked.
