

Event Handling in jQuery - Tasks

Task 1: Click Event - Show/Hide Content

- Create a button that toggles the visibility of a <div> when clicked.
- Use the .click() event to show or hide the content.

Bonus: Add animation using .fadeToggle().

Task 2: Keypress Event - Live Character Counter

- Create an input field where users type text.
- Display the number of characters typed in real time using the .keypress() event.

Bonus: Change the text color to red if the user exceeds 50 characters.

Task 3: Hover Event - Change Background Color

- Create a <div> with some text inside it.
- When the user hovers over it, change its background color using .hover().
- Revert the background color when the user moves the cursor away.

Bonus: Add a smooth transition effect using CSS.
